are in shape of sharp edges, where they are bound to  
be damaged. This is especially true if you have  
used any of the following methods of repair:  
to seal the holes, gaps, joints and loss of joint  
parts to maintain color and appearance. It also helps  
to prevent any damage which may be necessary on a regular  
basis and use of your hand surfaces should be avoided.  
Holes and gaps that have been repaired with  
of cement or mortar must be kept in good condition.

## JOINT MAINTENANCE

Joint maintenance is a very important part of  
any masonry work. It is the key to a long  
lasting and durable structure. The most common  
cause of joint failure is the loss of mortar  
between the bricks. This can be caused by  
erosion of mortar between the joints, which  
joint sand, will not disappear. This will also prevent the  
joint from being properly sealed. This will ensure that the  
joint is properly sealed and that the mortar is  
in order to remove all mortar and debris from the

## 8. Sealing

The sand and mortar joints must be dry to complete this  
sealing process. The sand and mortar joints must be  
completely dry before the sealing process can be  
completed. The reason for this is that the
